# CS 550 - Intro to Computer Graphics
Project - 2 - Animate the helicopter

1. **Name** - Lakshman Kruthik Manubolu

2. **OSU ID** - 934480655

3. **Email** - manuboll@oregonstate.edu

4. I have created a helicopter with two views -

   a. The long view where we can see the full picture of the helicopter.

   b. Cockpit view where you will be inside the helicopter and you can see the light in front of you and the blades rotating on the top.

The object that I have created is the light emitted from the front of the helicopter. I have created two new menu options - Inside and Outside to toggle between the views. When coming to the blades, the top blade is 5 units of radius and then the tail blade is 3. The tail blade rotates 2x faster than the top blade. The new two menu items are added which are outside and inside to toggle between the body view and cockpit view of the helicopter.
